

# Digital Client Portal – EmbedMed™

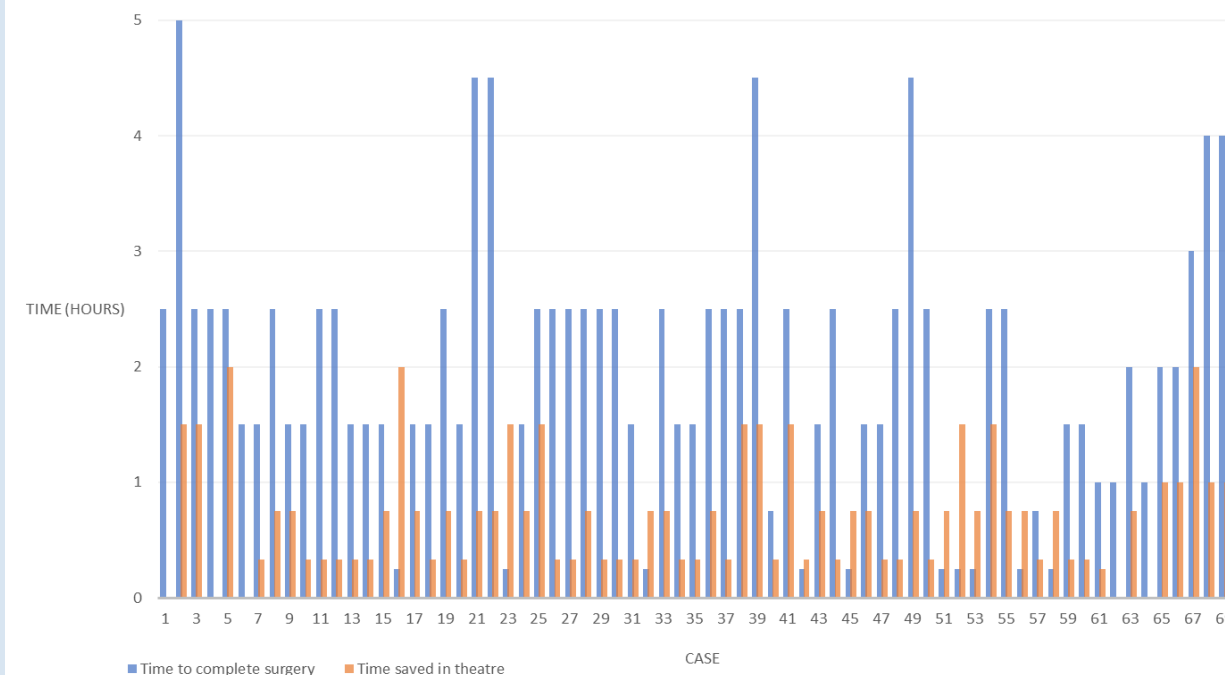

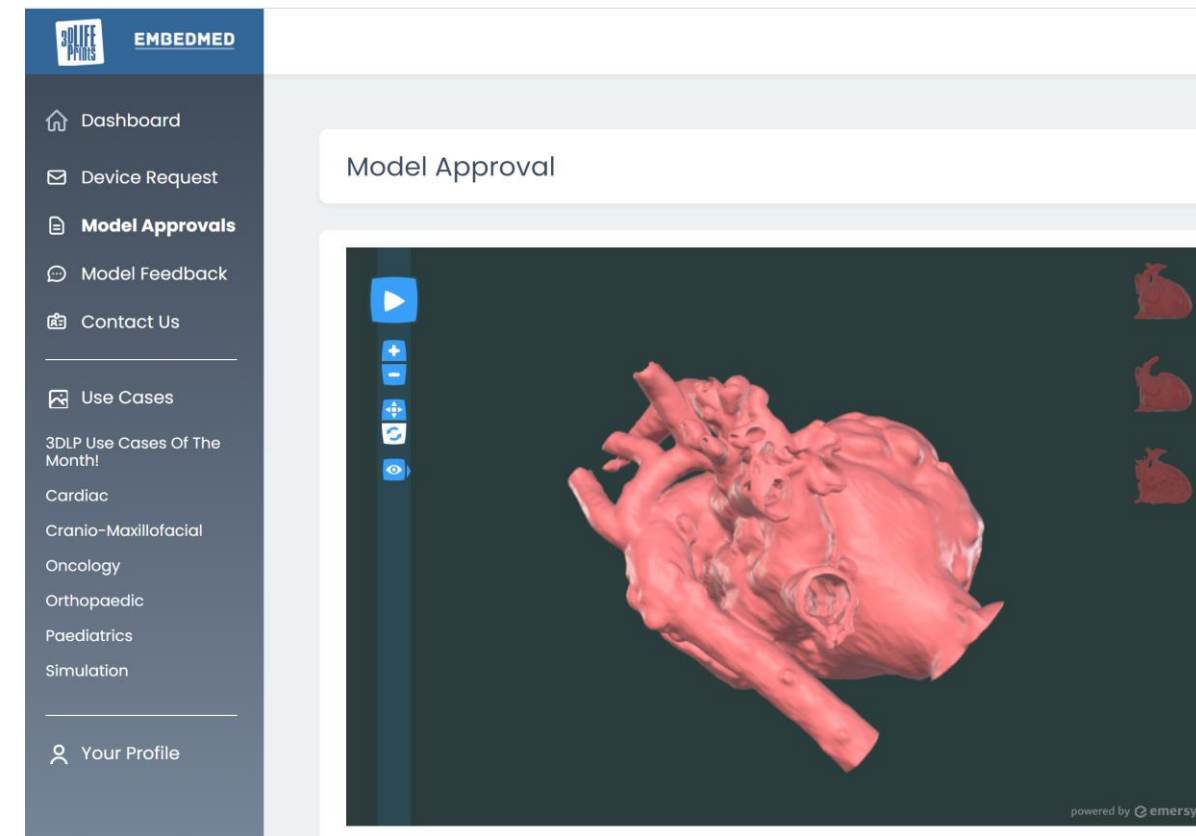

**Built with surgeons, for surgeons,** EmbedMed™ is a secure Cloud-based platform accessible over a wide variety of technologies.

**Clinicians can easily** order new medical devices such as virtual or physical patient-specific anatomical models and track their progress through the workflow.

**Advanced visualization** capabilities for clinicians and surgeons to assess patient anatomy on the go or discuss in detail with colleagues.

**In-built analytics** allow institutions to understand improvements in patient outcomes and lowered operational costs.

**Medically compliant,** built to adhere to ISO 13485 quality management standards for medical device regulations.

## Functions

- Multiple Medical Device request options
- Virtual 3D model view and interaction
- Device review & annotations
- Device approval/rejection
- Workflow notifications
- Case-by-case feedback/data collection

## Benefits

- Request/review/approve in one place
- Mobile accessible 24/7
- Virtual models in your pocket for discussion anytime
- Data captures can be analysed to assist with business cases
- Traceable device history and compliance assurance
- Seamless workflow to minimise user input
